Any final comments about the experiment?

5 responses

Clicking on the button was a tad difficult as I had to stop writing. If I could click a button on my phone or other device my wpm would probably be higher
it would have been helpful to be able to play the sounds again between trials, I forgot what they were almost immediately.
Crashed twice
I dont remember which sound was alert 1, alert 2 or alert 3 so I filled out the survey for alert questions from what i could remember but its probably out of order. Also lightly tapping the trackpad was not registering clicks so I was slower to press the button because i had to press down on the trackpad
It was pretty fun.

Any final comments for the team?

Good job on the experiment, everything went well
no
NA
Maybe using a mouse would be better?
Good job :)
Very cool experiment, well done!
